

HEALTH & SCIENCE

Health and science is something we often take for granted, but couldn't cope without. People who work in healthcare go home at the end of the week with more than just a paycheque. They know their work helps other people and makes our society be a better place.

Healthcare scientists help prevent, diagnose and treat illness using their knowledge of science and their technical skills. They use their expertise to help save lives and improve patient care in a supporting role or in direct contact with patients

Working in the healthcare industry comes with a set of physical demands. While office jobs might require you to sit all day, you can expect to be on your feet for hours on end if you're dealing with patients.

If you want to help make the world a healthier place, working in healthcare might be right for you.
